## CREAMERY and PRODUCE EDITION

This edition of "Smith's Computer" has been arranged especially for creameries, dairies, ice cream factories, cheese factories, commission merchants and wholesale and retail dealers in poultry, eggs, butter, etc. The publisher recommends that every purchaser of the book should study the suggestions carefully in the front pages and thus avoid any trouble in applying the tables.

### SMITH'S COMPUTERS

FORMERLY "EBY'S HANDY TABLES."

Four special editions now published. Each especially adapted to the work intended. Guaranteed to give satisfaction or money back after five days' trial. Sent anywhere in the world on receipt of price. If interested in any of the editions write for special descriptive literature. Send all orders to

**J. FRANK SMITH, Publisher, Pleasanton, Kansas.**

Creamery and Produce edition of "Smith's Computer" for calculating butter fat and values, covers all calculating in creameries, cheese and ice cream factories; also commission merchants, wholesale and retail dealers in poultry, eggs and butter. **Price, \$2.50.**

Lumber and Grain edition of "Smith's Computer," a quick and complete computer for retail lumber, hay, grain, coal, etc. **Price, \$2.50.**

Mercantile edition of "Smith's Computer," especially adapted for merchants in proving invoices, for billing clerks in wholesale houses and railway freight offices and making out checks for all kinds of pay rolls. **Price \$2.50.**

The above editions bound in red morocco with patent index.

Farmer's edition of "Smith's Computer," which does all the figuring for the farmer, gives the value of everything bought or sold on the farm, at any price per head, bushel, pound, ton or any other way. Complete wage tables, rules and tables for all kinds of weights and measures. Nothing needed left out. Bound in cloth. **Price \$1.50.**

The "Grain" and "Ton" tables are published in separate editions for special use. The "Ton" table is printed in large black type and on card board, which makes it very convenient for use in offices, to be tacked up near the scales or placed on the desk. Send to the publisher for circulars regarding these tables.

#### SPECIAL TABLES MADE TO ORDER

The author of "Smith's Computers" has prepared many special tables for particular lines of business and in many cases has compiled supplemental tables to be used in connection with one of his computers to make them more applicable to particular lines of business not covered completely by the regular tables. If any business man or clerk does not find one of Smith's Computers all that is desired let them write to the publisher, stating their needs and a special table or tables may be compiled to fit the case exactly.

\$2.50

**ANNOUNCEMENT.**

The first edition of "Eby's Handy Tables" was published in 1906. It was the outgrowth of a small set of tables prepared to meet the demands in the computing department of a creamery, poultry and produce business. Since the publication of the first edition the arrangements of the tables and the merits of the computer have been recognized by the business world as being simple, convenient and very practical. Many valuable suggestions have been made by users of the computer and every one of real merit that could be adopted have been added to the succeeding editions. By this plan of improving it the Fourth edition was pronounced by many competent judges as being about perfect, especially for the use of many lines of work. Over 5,000 copies of the computer are now being used in various parts of the world, mostly in the United States. The demand for it has grown steadily and its popularity and prestige has increased until it is now considered by the Commercial World to be as standard as the typewriter or adding machine. Its merits and value have been recognized by managers of many of the largest manufacturing and mercantile establishments in this country and from one to a half dozen copies are being used in many of them.

Almost every State Agricultural College and State Experiment Station in this country are using "Eby's Handy Tables" as a text book or standard computer. The U. S. Government has purchased many copies for use of its agents in the field work of the Department of Agriculture and especially in Dairy Husbandry.

**CHANGE OF NAME.**

Many friends and users of the computer have said to the publisher that the title to the book did not convey the proper meaning or significance, and have suggested that another title be used with the view of carrying with it a more definite idea of its contents and purposes. Appreciating the force of these suggestions the title has been changed to "Smith's Computer."

**FOUR SPECIAL EDITIONS.**

While the latest edition of the computer can be applied to almost any line of business where there is any computing to be done, the publisher has found from inquiries and suggestions that there is a demand for special editions, arranged to meet the needs of the various kinds of computing. The value of the computer in any business depends on the ability of the user to successfully apply it to his work. The multiplication tables are alike in all editions, but the instructions, examples and special tables, instead of being of a general nature, have been arranged and compiled to suit the needs of these lines for which each special edition has been devoted. Hundreds of personal letters have been written by the publisher to men or firms of all classes of business explaining how to apply the tables. In almost every case the purchaser of the computer has been convinced of its value and its application has been made easy. To overcome this condition was the chief purpose of the special editions. To add to its value and widen its field of usefulness the present editions have been enlarged by about 50 additional tables, besides more fully explaining its use and application to various special lines. The Four Special Editions are as follows:

"Creamery and Produce Edition."

"Lumber and Grain Edition."

"Mercantile Edition."

"Farmers' Edition."

Each of these editions has been especially arranged to meet every need of the work to be found in all the branches and departments of these lines. If more information is desired on any one of the above editions the publisher will gladly send special literature concerning the edition on request.

The general style, binding and quality of the book is maintained in these new editions. The double index remains as one of its chief features of convenience.

My faith in its merits is so strong that I am still willing to send it to any responsible person or firm in the United States on five days' free trial. If not found satisfactory it can be returned or if the cash has been sent in advance it will be refunded cheerfully on request and return of the computer.

My offer in the former editions to give free a copy of the computer to the one first reporting an error in the tables still stands good in all these editions. This offer is for any error of over 2 cents, but only the first to report same will be entitled to the free copy. The few errors heretofore reported have all been corrected in these editions and I do not expect to be called on for but few, if any, free copies.

I ask every purchaser to read carefully the suggestions and examples before using the computer and if there is still any doubt about its application to your business write me and I will be glad to explain more fully just how to apply it to your work. Respectfully,

**J. FRANK SMITH, Publisher,**  
Pleasanton, Kansas.

**NOTE**—The small table on the bottom of the "7 per cent" pages headed "Weights and Specific Gravities of Liquids," was taken from another book and inserted without carefully noting its character, the author or compiler not being given. The table was found to have been based on the weight of the standard English gallon, which is 10 pounds, and does not agree with the weights and specific gravities of liquids in the United States. The comparative weights and gravities are correct using the English gallon as the basis, but the weights of the liquids are not correct according to the standard of the United States and should not be used here.

# HOW TO APPLY TABLES

## WATCH THE DECIMAL POINT.

The full value of the tables in this handy book depends somewhat on the ability of the user to properly manipulate the decimal point.

For example, as they stand each page contains the multiplication table of the number on the top of that page from 1 to 500. But by carefully placing the decimal point the tables can be extended from 500 to 500,000 very easily. To illustrate: 27 3-4x256 equals 7.104. Or 27 3-4x25,600 equals 710,400. Or 27 3-4x25.6 equals 710.4. Or, if it is 256 pounds butter at 27 3-4 cents per pound, the result would be \$71.04. But if it is 256 head of cattle at \$27.75 (27 3-4) per head it would be \$7,104.00. Or if it was 25.6 pounds butter at 27 3-4 cents per pound the amount would be \$7.10.

These suggestions should be sufficient to start anyone on the right road to manipulating the decimal point and illustrate the possibilities of the tables by one who can use them to their full capacity.

Example:—48.9 pounds of butter fat, price 22 cents per pound. Instead of finding the value of 48 pounds and then .9 of a pound and adding, just turn to the 22 table and run to 489, and you have 107.58, but by moving the the decimal one point to the left you have \$10.76.

In this way if you are paying, say 25 or 25 1-2 cents per pound for butter fat and you are ready to figure the value of the cream of each of your patrons, it will all be done on one page and without any additions.

## ARTICLES BOUGHT AND SOLD BY THE DOZEN.

To find the value of any number of articles sold by the dozen turn to the number representing the price per dozen, whether it be cents or dollars per dozen. Run to the number of dozen and you have the amount. If there are broken dozens note the tables at top of pages. The lower figures represent cents and the upper row dollars. The extreme top three rows of figures on left side of each page indicate the three ways the tables may be used, representing three different prices. The three numbers on the upper right corner of each page represents the value of articles by the gross and case when the price per dozen is that of the table number.

## NOTE TO WHOLE MILK DEALERS.

The "Milk Test" table, covering two pages, is computed on the basis of 4 per cent milk, giving comparative prices of all other grades. However, if any dealer uses any other grade as the standard for example 3.5 per cent milk, the price under the 3.5 column can be used as the standard and the prices of other grades can be readily seen.

## STANDARDIZING MILK TABLE FOR ICE CREAM MAKERS

One full page is devoted to a table for the ice cream maker in standardizing milk or cream to a given test when various grades of cream are mixed with whole milk and also skimmed milk. This will be found to be the most complete table of the kind published.

## FOR THE WHOLESALE AND RETAIL EGG DEALER.

This computer has been prepared especially with the needs of the egg dealer in view. The value of any lot of eggs, either by the dozen or by the case can easily be determined. Bear in mind that the tables can be used to represent almost any price. Simply turn to the table representing the price per dozen or case and find the number of dozen or cases and the value will be given. The value of broken dozens is given at top of each page.

## TABLE OF COMPARATIVE VALUES.

One full page is given to a table with comparative prices of articles sold by the one, by the dozen and by the gross and per case. This table ranges from 3½ to 95 per each dozen and it can be cents or dollars, with the exact value by the one, or gross or case. This will help many merchants in computing retail prices when the articles are bought by the gross or case.

## FOR COMPUTING GAS AND WATER BILLS.

To compute the gas or water bills with this computer the user has only to open the book to the table representing the price per 1000 cubic feet for either and then find the number representing the quantity and the amount will be given.

Example: 125 thousand feet of gas at 30 cents. Use the 30 table and run to 125 and you have \$37.50. Discount 5 per cent; turn to the 95 table and run down to 375 and you have \$35.62.

## HELPFUL SUGGESTIONS.—HERE ARE A FEW LETTERS AND ANSWERS WHICH EMBODY SOME PRACTICAL SUGGESTIONS ON HOW TO APPLY THE COMPUTER.

The former editions of my computer, then entitled "Eby's Handy Tables" contained what I thought to be full instructions on how to apply the book to the creamery, cheese and egg business but I often received letters from users asking for further instructions. I published a few of them which proved to be so helpful that they are reprinted herewith believing they will be of great help to those who buy and use the computer for the first time. If any purchaser of my computer has any trouble whatever applying the tables to his business I will be glad to hear from such party personally with a few sample problems and will take pleasure in writing fully just how to apply the book to the work in hand.

## FOR CHEESE MAKING.

Chilton, Wis., July 18, 1911.

I am sending you a few examples. I was quite busy and didn't get around sooner.

I got 200 lbs. milk, 3.50 test, got 16 lbs. cheese from it at 12 cts. per lb. I get 1¾ cents for making per lb. cheese.

Please let me hear from you. Yours,

W. F. BENNIN.

July 24th, 1911.

W. F. Bennin, Chilton, Wis.

Dear Sir:—Yours to hand with several problems of your work

in cheese making. They seem very easy and you should have no trouble in working any of them with the book. In order to make fast time the list of patrons should be set down in a column and after each name put down the amount of milk received and the test. After all these have been set down then use the book to compute the fat in each lot. In another column opposite each name also put down the number of lbs. cheese made from it and the price and then compute the value of all at one time. Then by using the 1 $\frac{3}{4}$  page you can easily find what is due for making the cheese. The plan is to have all of your examples down on paper before you begin to use the book and then run down each column and compute each set of figures at once, and in many cases it can be done with very little turning of pages. Try this plan and after a week's trial let me hear. Yours,

J. FRANK SMITH.

#### BUYING MILK BY THE 100 LBS.

Ann Arbor, Mich., Jan. 18, 1911.

I cannot find any rule that will comply with our way of buying milk, as we buy at \$1.65 per 100 lbs.

I think the book is alright and if you can tell us how to use the book for \$1.65 per 100 we will be glad to keep it. I should have written you sooner but have been too busy to look over the book.

Trusting that you may tell us how to use it. We remain,  
Yours truly, WURSTER BROS.

January 24th, 1911.

Gentlemen:—Yours of January 18th inst. to hand asking how to find the value of milk at \$1.65 per 100 lbs. This is very simple; example 4600 lbs. of milk at \$1.65 per 100. Turn to the 46 table and run to 165 and you have 46x165=\$75.90. If you have 4600 lbs. at \$1.75 per 100 you can do it in two ways. Take 46x175 or 1 $\frac{3}{4}$ x46 or 17 $\frac{1}{2}$ x46. They all bring the same answer. You must move the decimal point when you use 17 $\frac{1}{2}$ . If the price paid is \$1.50 per 100 you can either use 1 $\frac{1}{2}$  or 15, remembering that the 15 is in fact 1.5 so as to place the demical in the right place. If you have 3550 lbs. milk you can call it 35 $\frac{1}{2}$  hundred. If you have 2625 lbs. milk call it 26 $\frac{1}{4}$  hundred. If you have 4665 lbs. milk and the price is \$1.65 the best way is to turn to 16 $\frac{1}{2}$  table, remembering that it is 1.6 $\frac{1}{2}$ . Then run down to 46 and you have the value of 4600 lbs. Then on same page run to 65 and you have the value of 65 lbs. and by adding you have the total value. All done on one page quickly. The only mental effort required is to add the two. Let me hear from you if this is satisfactory. Respectfully,

J. FRANK SMITH.

#### BUYING WHOLE MILK

New London, Wis., July 26, 1911.

Yours of July 16 received and contents noted. I will inclose a few items of figures so you can explain how to use the book to advantage.

Lbs. Milk	Test	Price per cwt.
11,071	3.5	\$1.01 for 4.0 milk
12,824	3.6	
13,609	3.7	

The above figures are the milk from four different patrons and the price of 4.0 per cent milk for that month was \$1.01 per cwt. The second row of figures is the average test of each patron for the month. Kindly figure these out and explain to me fully.

Yours truly,

E. C. HEINRICH.

July 28th, 1911.

Mr. E. C. Heinrich, New London, Wis.

Dear Sir:—Yours to hand with sample problems enclosed. They can be worked out very easily by the book in this way:

Turn to the double page in the front part of the book called "Milk Test Table". By running down the four per cent column to \$1.01 and then finding the number opposite under the other tests you will find them as follows:—

When 4 per cent milk is worth \$1.01, 3.5 per cent milk is worth 88 cents, 3.6 per cent milk is worth 91 cents, 3.7 per cent milk is worth 93 cents, 3.4 per cent milk is worth 86 cents.

Then to get the value of each lot of milk is to multiply by the price.

Example:—11,071 lbs. milk test 3.5 worth 88 cents. In this lot you have 110 hundred lbs. Then multiply 110 by 88 by using the 88 table and you have \$93.80. Then by 88 page you see what 71 lbs. is worth by multiplying and you have 62 cents. Total value \$94.42.

All the others can be worked the same. The milk test table in this case is valuable. And when it comes to finding the value of the milk when the price is by the 100 lbs., be sure to use the figures representing the 100 lbs.. Example: 45,765 lbs. milk. In this you have 457 hundred and then you have 65 pounds. If the price is 88 cents per 100 lbs., then use the 88 page and multiply first the even hundred and then the odd pounds. Add the two.

Try this out and let me hear from you.

Yours truly,

J. FRANK SMITH.

#### TRANSPOSING MULTIPLIER.

Dear Sir:—Yours to hand with check for book. Thanks for same. I note what you say about not understanding the book fully. I feel sure that when you once get familiar with it that you will have no trouble. The main key to the use of the tables is to be able to handle the decimal point without making errors, and also be able to transpose your multiplier. That is, if you have 680 lbs. milk test 3.75, turn to the 68 table and run to 375, and by placing the decimal in the right place you have the butter fat. Again, if you have 485 lbs. milk test 3.75, turn to the 37 1-2 table and run to 485, and by placing the decimal in the right place you have the butter fat.

In the example you gave, 530 lbs. milk test 3.70. Just turn to the 37 table and run to 53, bearing in mind that it is

530 and you have 19.61 lbs. fat. Or you can turn to the 53 table and run to 370, bearing in mind that it is 530x3.70 and you have 19.61 lbs. fat. I feel sure after a few days experience the use of the tables will appear very simple and easy.

Yours,

J. FRANK SMITH.

### HELPS ICE CREAM FACTORIES.

Buffalo, N. Y., April 22, 1911.

Referring to your circulars covering "Eby's Handy Tables" to find the butter fat in cream, value of same. We wish to assure you that it is excellent for the purpose designed, however this would not suit our purpose as we are able to note.

We would be interested in a rate book which would show the value of milk in pounds from one pound to five thousand pounds to cover all denominations from, say 75 cents to \$2.00 per hundred. In other words we are buying milk by the hundred, cost for same being test on the butter fat value, milk today may be 94 cents per hundred, next week \$1.09 rate, never being twice a like.

Very respectfully yours,

WHEAT'S ICE CREAM CO.

April 24th, 1911.

Wheat's Ice Cream Co., Buffalo, N. Y.

Gentlemen:—Your to hand of 22nd inst. regarding the book and also suggesting what you need in your business. I am not sure but believe that you can make my book do your work satisfactorily by the proper manipulation.

The book has a table giving comparative value of all kinds of milk, starting on a 4 per cent basis. When you by milk in large lots, of say 50 to 5,000 pounds the book will do your computing very well.

Example:—3,450 pounds of milk at 94 cents per 100. Turn to the 94 page and run to 345, and you have the value of the lot by placing the decimal in the correct place. The milk is, in fact, 34 1-2 hundred, and you could work it another way by turning to the 34 1-2 table and running to 94.

Another Example:—4,680 pounds of milk at \$1.11 per 100. Now we have no 111 table nor 46 8-10 table, so we do it this way. At \$1.00 per hundred it would be \$46.80. Then turn to the 11 table and run to 468 and the amount, with the decimal in the right place, would be the value of the 4,680 at 11 cents per 100, which added to the \$46.80 makes the total.

Example:—860 pounds of milk at \$1.17 per 100. Turn to the 86 table and run to 117, and the result, with the decimal in the right place, gives the amount.

By the proper placing of the decimal and the changing of the numbers, one can, when they get accustomed to the tables, do practically any example in the cream and milk business in a second. Thanking you for your inquiry and hoping you will give "Eby's Handy Tables" an honest chance to make good.

I am, yours truly,

J. FRANK SMITH.

### To Find Butter Fat In Whole Milk.

If the test is 3.75, use the 37 1-2 table; if the test is 3.8, use the 38 table; if the test is 3.85, use the 38 1-2 table, and so on. Watch the decimal point and place it correctly and you will have no trouble. If you have over 500 pounds of milk, for example, 1765 pounds, turn to the table representing the test and run to 17; to the result add two ciphers; then find the amount of butter fat in 65 pounds and add. It can all be done on one page of the book in a few seconds..

Example: Four hundred and seventy-five pounds of milk, test 3.1 per cent; price, 31 cents per pound. Use the 31 table and run to 475 and you have 14.7 pounds butter fat. To find the value of same use 31 table, run to 14 and you have \$4.34. By referring to foot tables, 7 pounds is worth 22 cents, which, added to \$4.34, makes \$4.56. In actual work you simply set down the result and it is quickly done.

Example: Nine thousand six hundred and forty pounds milk, test 3.1 per cent. This means that there are 3.1 pounds butter fat in each 100 pounds of milk. To find the fat in 9600 pounds, turn to 31 table and run to 96 and you have 297.6 pounds of fat. Then to find fat in 40 pounds, use 31 table, same as before, and run to 40 and you have 1.2 pounds, which, added to the first, makes 298.8 pounds. Find value of same as in the first example.

### To Find Butter Fat In Cream.

Example: Forty-one pounds cream, test 31 per cent. On the 31 table run down the numerical column to 41 and to the right you find 12.71, which is 12 7-10 pounds of butter fat. To find the value of this at 31 cents per pound, use the 31 table in this book and run to number 12, which gives you the value of 12 pounds, \$3.72. To find the value of 7-10 pounds, see the foot table on same page and find the decimal .07 and above this 22, the exact value in cents, which, added to \$3.72, makes a total of \$3.94.

# For Ice Cream Making

## Modifying Cream

Directions Given by Prof. R. M. Washburn in Bulletin 155, Vermont Station.

Creams of certain definite fat contents have been recommended in the preceding pages for specific purposes. Now all creams are not alike. Some are lean and some are fat. The same cream delivered by the same party may carry decidedly different fat contents, today and tomorrow. It is highly desirable that a uniform fat percentage be maintained in the cream used in a given factory. Hence, there should be means at hand for standardization and the method of the attainment of that end should be clearly understood. This proposition has been worked out and modifying cream to standard strength is now an every-day operation in many commercial plants.

### Directions For Modifying Cream.

The simplest and most accurate method of modifying cream or milk to any desired standard of butter fat is that developed by Pearson. This method, discussed below, is applicable not only in ice cream making, but in market milk and cream work generally.

Example 1. Given a 40% cream and a 4% milk, to be mixed to produce a 16% cream. The amount to be used can be determined very readily by the following procedure:

(1) Subtracting the figure representing the desired quality from the known cream fat percentage to obtain the amount of milk to be used.

(2) Subtracting the known percentage of milk from the desired percentage of the mixture to obtain the amount of cream to be used.

Thus, in the above stated example,  $40 - 16 = 24$   $16 - 4 = 12$ . This can best be illustrated by drawing a square and placing the figures as shown in the accompanying diagram:

It will be noticed that in this particular example the proportions of cream to milk are 12:24; that, in other words, by mixing together 12 gallons of 40% cream and 24 gallons of 4% milk there will be obtained 36 gallons of 16% cream.

If one wishes to know for example how much cream should be added to a 40 quart (10 gallon) can of 4% milk to make a 16% cream, the ordinary rule of proportion is involved.

$$24:12::40:x=20 \text{ qts. or 5 gals.}$$

Strictly speaking, and for work of extreme accuracy, cognizance should be taken of the weights of cream and skimmilk rather than of their volumes. But as a matter of fact this is quite unnecessary for ordinary commercial purposes. Any minor error introduced by the use of volume rather than of weight in calculation is far within the limit of error of the operations of sampling and testing. In view of this fact, and of the added consideration that calculation on the weight basis, while not intricate, is notwithstanding much less simple than is that on the volume basis, the latter system only is used for the purposes of illustration.

Example 2. Given a 42% cream to be reduced by skimmilk to an 18% cream. The square will be:

Mixing in the proportion of 18 cream and 24 skimmilk, the result is attained. Figuring as before for proof:  $42 \times 18 = 7.56$   $.00 \times 24 = .00$   $7.56 + .00 = 7.56$   $18 + 24 = 42$   $7.56 \div 42 = .18$ . If one wishes to know for example how much cream should be added to 10 gallons of skimmilk to make an 18% cream, one figures as before.  $24 : 18 :: 10 : x$   $x = 7\frac{1}{2}$  gallons.

Or, reversing the proposition, if one has a 10 gallon

can of 42% cream and wishes to know how much skim-milk to add to it to reduce it to an 18% grade, one figures  $18 : 24 :: 10 : x$   $x = 13\frac{1}{2}$  gallons which will be found sufficient.

Factories wishing to use whole milk for modifying purposes naturally wish a standard milk for this purpose. Hence the next example, which deals wholly with milk, is pertinent.

Example 3. Given milks carrying  $3\frac{1}{2}$  and 5% fat to be mixed to make 4% milk:

5	4.	.5	( $4 - 3\frac{1}{2} = \frac{1}{2}$ )
3.5	1		( $5 - 4 = 1$ )

$\frac{1}{2} : 1 :: 1 : 2$ . Hence one can of the lower and two of the higher grade will make three cans of the 4% grade. Any other figures may be used as desired; as, for example 4.6 and 3.3 to make a 3.7% grade.  $4.6 - 3.7 = 0.9$ .  $3.7 - 3.3 = .4$ . Four parts of the higher grade and nine parts of the lower are called for.

By means of the homogenizer a cream fit for ice cream can be made from an unsalted butter, using whole or skim-milk as a fluid means to this end. Hence the next two examples have direct bearing upon this matter.

Example 4. It is desired to make a 16% cream from unsalted butter and skim-milk. It is fairly safe to assume that such butter carries 82% fat, but it is hardly safe to assume a higher amount. The figure then stands as below:

82	16	16	( $16 - 0 = 16$ )
0	66		( $82 - 16 = 66$ )

It will then require 16 pounds of unsalted butter for every 66 pounds or pints of skim-milk.

In one problem which was considered in practical work, 34 pounds of butter were to be used, and the operator needed to know how many pounds of skim-milk to put with this butter, which tested 82% fat, to produce a cream testing 16%. His proportion stood  $16 : 66 :: 34 : x$ .  $34 \times 66 \div 16 = 140$ . He needed 140 lbs of skim-milk to add to his 34 pounds of 82% unsalted butter to produce a 16% cream.

Reversing the problem: one has a can of skim-milk weighing 85 pounds; how many pounds of 82% unsalted butter are needed to make therewith a 16% cream? The proportion will read,  $66 : 16 :: 85 : x$ .  $16 \times 85 \div 66 = 20.6$ . 20.6 pounds of unsalted butter, if homogenized with one 40 quart can of skim-milk, will produce a 16% cream.

Another very convenient tool in this connection is a rule by which one may find directly how many gallons (or pounds) of rich cream and a skim-milk will be required to produce any definite number of gallons (or pounds) of a cream testing any definite percentage of fat. The rule is: Multiply the amount of cream desired by the test of the cream desired and divide this product by the test of rich cream at hand. This will give the amount of the rich cream required for the mixture. The difference between the amount of cream desired and the amount of rich cream required will indicate the amount of skim-milk required to be mixed with the rich cream to produce the desired result.

For example, suppose one has on hand cream testing 40% fat and skim-milk, and that he wishes to know how many gallons of each will be required to produce 6 "jugs" or 6 ten-gallon cans of cream testing 18% fat. The formula will then be:

Amount of cream desired (60 gals.)  $\times$  test of cream desired (18%) divided by test of cream at hand (40%) = number of gallons of rich cream required (27 gals.)

or

$$\frac{60 \times 18}{40} = 27$$

and  $60 - 27 = 33$  or the number of gallons skim-milk

required to be added to the 27 gallons of 40% cream in order to secure 60 gallons of 18% cream.

In order to facilitate the calculations of modification the following tables have been prepared, indicating the proportions of skimmilk and creams of varying qualities from 18% to 40% which should be used in the making of a cream modified to definite percentages varying from 10 to 25%. The first table is based on the use of 6 gallons of the fluid raw material, from which, if the process is properly conducted, 10 gallons of the complete and frozen goods may be obtained. The second shows the proportions in terms of pounds or pints of the two materials used in making a definite grade of finished product. For home making purposes the error in assuming that a pint of cream will weigh a pound will not be important.

#### Modification Table for Use in Making Approximately Ten Gallons of Ice Cream.

Showing the approximate amount of cream and skimmilk needed to obtain 6 gallons of cream before freezing. The figures are stated as Gallons.

Qual. desired,	10%	12%	15%	18%	20%	22%	25%
Kind of stock,							
18% cream,	3½	4	5	6			
Skimmilk,	2¾	2	1	0			
20% cream,	3	4	4½	5 1-3	6		
Skimmilk,	3	2	1½	¾	0		
22% cream,	2¾	3½	4	5	5½	6	
Skimmilk,	3½	2¾	2	1	½	0	
25% cream,	2 2-5	3	3 3-5	4½	4 4-5	5½	6
Skimmilk,	3 3-5	3+	2 2-5	1¾	1 1-5	¾	0
30% cream,	2	2½-	3	3 3-5	4	4½	5
Skimmilk,	4	3½+	3	2 2-5	2	1¾	1
35% cream,	2-	2+	2¾	3+	3 3-7	3¾	4 2-7
Skimmilk,	4+	4-	3½	3-	2 4-7	2¼	1 5-7
40% cream,	1½	1 4-5	2¼	2¾	3	3 3-10	3¾
Skimmilk,	4½	4 1-5	3¾	3¼	3	2 7-10	2¼

NOTE.—This table may be used as follows: An 18% cream is to be frozen. One has a 30% cream on hand and skimmilk. One follows the perpendicular column headed 18% downwards until the location is reached which is on the horizontal line bearing the title at the left "30% cream." The figures at this point show the proportions of 30% cream (3 3-5 gallons) and of skimmilk (2 2-5 gallons) needed to make an 18% cream.

#### Modification Table for Use in Making Approximately A Gallon of Ice Cream.

Showing the approximate amounts of cream and skimmilk needed to obtain 4 pounds of fluid cream before freezing of the desired grades. The figures are stated as Pounds or Pints.

Quality desired,	12%	15%	18%	20%	22%	25%
Material on hand to be mixed						
18% cream,	2.7	3.3	4.			
Skimmilk,	1.3	.7	.0			
20% cream,	2.4	3.	3.6	4.		
Skimmilk,	1.6	1.	.4	.0		
22% cream,	2.2	2.7	3.3	3.6	4.	
Skimmilk,	1.8	1.3	.7	.4	.0	
25% cream,	1.9	2.4	2.9	3.2	3.5	4.
Skimmilk,	2.1	1.6	1.1	.8	.5	.0
30% cream,	1.6	2.	2.4	2.7	2.9	3.3
Skimmilk,	2.4	2.	1.6	1.3	1.1	.7
35% cream,	1.4	1.7	2.1	2.3	2.5	2.8
Skimmilk,	2.6	2.3	1.9	1.7	1.5	1.2
40% cream,	1.2	1.5	1.8	2.	2.2	2.5
Skimmilk,	2.8	2.5	2.2	2.	1.8	1.5
45% cream,	1.1	1.3	1.6	1.8	2.	2.2
Skimmilk,	2.9	2.7	2.4	2.2	2.	1.8
50% cream,	1.	1.2	1.4	1.6	1.8	2.
Skimmilk,	3.	2.8	2.6	2.4	2.2	2.

NOTE.—This table may be used as follows: A 20% cream is to be frozen. One has a 35% cream on hand as well as skimmilk (whole milk may be used instead and the ice cream be none the worse and probably a good deal the better for it, if it is not made over-rich). One follows the perpendicular column headed 20% downwards until the point is reached which is on the horizontal line bearing the title at the left "35% cream." The figures at this point show the weights (lbs.) or measures (pints) of 35% cream (2.3) and skimmilk (1.7) needed to make 2 quarts or 4 pounds of a 20% cream.

**ANOTHER STANDARDIZING TABLE**

By PROF. M. MORTENSEN, Iowa State College

When a given amount of cream of a fixed standard is to be prepared, multiply the amount in pounds to be prepared by the difference between the test of the standardized cream and the test of the milk used. This product is divided by the difference between test of original cream and of milk used, the result is amount of original cream required.

For the purpose of facilitating the work in the ice cream department, standardizing tables can be used to advantage. The writer herewith offers tables for standardizing 25 and 20 per cent cream by reducing both with skimmilk and milk testing 3.6 per cent, which is nearly an average test for milk produced during the summer season.

**Cream Standardized to 20 Per Cent.****Standardizing with Skim-milk****Standardizing with  
3.6 per cent Milk.**

Test of Original Cream.	Amt. of Original Cream.	Amt. of Skimmilk.	Amt. of Original Cream.	Amt. of 3.6 per cent Milk.
21	95.2	4.8	93.7	6.3
22	90.9	9.1	89.1	10.9
23	87.0	13.0	84.5	15.5

## TO EXTEND OR VERIFY INVOICES.

The tables in this computer can be used successfully to verify the extensions in almost any kind of invoice. Each table represents the multiplication table from 1 to 500 and by shifting the decimal each table can be extended to 50,000 very quickly and easily. It would be impractical to attempt to have tables running to high numbers and it only requires one addition to make every table handle any large number.

Example: If you have 620 articles at 57 cents each simply turn to the 57 table and run to 62 and shift the decimal point to the position it would be in case the 62 was 620. This you can readily see at a glance. If you have 875 articles at say  $3\frac{3}{4}$  cents each, turn to the  $8\frac{3}{4}$  table and run to 375 and you have the amount. If you have 960 articles use the 96 and shift the decimal. If you have 1450 use the 145 and move decimal. If you have 45639 articles first use 456 and move decimal two places and then find value of 39 and add.

If you have articles sold by the dozen and have parts of dozens the tables at the top of the pages will give the exact value of any part of a dozen at the price indicated by the number of the table. This is very convenient in mercantile business.

Then it must be borne in mind that every table in the book can be used in at least three ways or rather to represent three different prices. For example: the  $3\frac{3}{4}$  table can represent  $3\frac{3}{4}$  cents or \$3.75 or \$37.50. And  $31\frac{1}{2}$  can represent  $31\frac{1}{2}$  cents, \$3.15 or \$31.50. And  $30\frac{1}{2}$  can be used as  $30\frac{1}{2}$  cents or \$3.05 or \$30.50. In changing the value of the tables the only important thing is to place the decimal in the proper place, as the numbers are sure to be correct if set off by the decimal correctly.

These are only suggestions and by a little study and application the user can apply them in many other ways by transposing the multiplier and multiplicand. Example: 64 articles at \$1.37 each, use the 64 table; 462 articles at \$1.25 each, use the  $1\frac{1}{4}$  table.

By the use of "Smith's Computer" the most difficult invoices may be computed quickly and correctly. To make the greatest speed it is well to compute the items in the invoice—which can be done with one table while the book is open on that page. Then turn to another page and compute all the items of the invoice that can be done by that table. In adopting this plan it eliminates the frequent turning to different pages. Here is a sample invoice and suggestions on how to do it quickly by the tables:—

## INVOICE.

Description	No. Doz.	Price	Amount	How it is done
Mens' Hose .....	$4\frac{3}{4}$	\$ 2.25	\$10.69	$2\frac{1}{4} \times 475 = \$10.69$
Men's Hose .....	$3\frac{1}{2}$	2.15	7.52	$3\frac{1}{2} \times 215 = 7.52$
Men's Gloves .....	$6\frac{1}{4}$	2.25	14.06	$6\frac{1}{4} \times 225 = 14.06$
Underwear .....	$4\frac{1}{2}$	6.25	28.12	$6\frac{1}{4} \times 450 = 28.12$
Boys' Coats .....	$2\frac{1}{4}$	4.75	10.69	$2\frac{1}{4} \times 475 = 10.69$
Towels .....	$3\frac{1}{2}$	.37 $\frac{1}{2}$	1.31	$3\frac{1}{2} \times 375 = 1.31$
Ladies' Waists .....	5-12	15.50	6.46	Top table p 15 $\frac{1}{2}$
Gingham .....	44 yd.	.06 $\frac{1}{4}$	2.75	$6\frac{1}{4} \times 44 = 2.75$
Boys' Pants .....	2-12	6.25	1.04	Top table p 6 $\frac{1}{4}$
Boys' Pants .....	5-12	3.12 $\frac{1}{2}$	1.30	Top table p 31 $\frac{1}{4}$
Gloves .....	7-12	2.15	1.25	Top table p 21 $\frac{1}{2}$
Suits Underwear ....	$1\frac{1}{4}$	3.65	4.56	$1\frac{1}{4} \times 365 = 4.56$

These are only sample items and may be applied to drugs, hardware, groceries, or any other lines. When the invoice is copied, all except the amounts in each item, "Smith's Computer" can be used to compute the values. For the above invoice the first table to be used would be  $2\frac{1}{4}$  and while the book is open it is well to handle all items that can be done with this table. Then use the  $3\frac{1}{2}$  page and extend all items by it and then  $6\frac{1}{4}$  and extend all those items. Some of the items in the invoice may be so simple and easily extended that it can be done at a glance. These should be set out and then use the computer for those which require pencil and paper to compute accurately. In case the item is such that one number in any one table will not work it then it is probable that by two multiplications in one table they can be handled.

Example:  $17\frac{1}{2}$  dozen articles at \$9.65 per dozen. Use the  $17\frac{1}{2}$  page and find value at \$9.00, which is \$157.50, and then to .65, we have \$11.37, and by adding the two you have the amount, \$168.87.

For computing discounts see suggestions and table showing how it is done.

Give them a thorough trial and an honest chance to make good and if they can not be applied to the work in hand successfully, write to the publisher and give him a few sample problems and if the computer will not handle them he will frankly tell you and if it can work them he will be glad to write and explain fully how to apply them.

## FOR THE FARMER.

By a careful study of the tables in this computer almost every problem on the farm can be solved. It covers the items of wages of all kinds, tells how to find value of all kinds of live stock, hay, grain and other commodities and gives many valuable rules for general use, including comparative grain prices, converting loads of grain into bushels and odd pounds, tells how to find number of tons of hay in round stacks, ricks, mows, etc. Also grain in bins.

The full value of the work to the farmer can not be fully appreciated without a careful inspection of its pages and a few applications in practical every day transactions. It is almost as valuable as a course in a business college which would cost from \$50 to \$100 in tuition besides the time and other expenses necessary to attend school. If the farmer boy is attending school he can well afford to devote some time to the use and study of this book. It would help him wonderfully in all departments of arithmetic.

## FOR COMPUTING DISCOUNTS.

Much valuable time and unnecessary energy are consumed by the clerks and bookkeepers in almost every business house in computing discounts on invoices. The rates of discount are so varied that it would be next to impossible to give a table to cover every possible need, but the ones given below will be found to cover most discounts. Study the table carefully and note the different ways of finding the net amount of any sum.

Discount.	Page to Use		Page to Use	
	Per Cent Off.	for Discount Off.	Per Cent On	for net Amount
1%	1%	1	99%	99
2%	2%	2	98%	98

70-5%	71½%	71.5	28½%	28½
70-10%	73%	73	27%	27

In applying these tables to your discounts the cents in the given amounts should be represented by a fraction of a dollar whenever it can be done, as it will enable you to use the page number often as the amount to be discounted. As \$10.50 is the same as 10½ dollars, \$17.75 is the same as 17¾ dollars, \$31.25 is the same as 31¼ dollars, \$1100.00 can be represented by 11, \$1250 can be represented by 12½, \$1750.00 can be represented by 17½, \$2350.00 can be represented by 23½, \$1975.00 can be represented by 19¾, and so on up and down the line.

Example:—Amount of bill, \$34.75, discount 10%. Use the 34¾ page and run to 90 and you have the net amount.

Another example:—Amount of bill, \$87.50, discount 15%. Use the 8¾ page and run to 85 and you have the net amount, \$74.375.

Another example:—Amount of bill \$1150.00 and discount 25%. Use the 11½ page and run to 75 and you have the net amount, \$862.50. Or you can use the 75 page and run to 115 and you have the same net amount, \$862.50.

Another example:—Amount \$456.00 and discount 33¼-5% off. First use the ¾ page and run to 456 and you have \$304.00, and then use the 95 page and run to 304 and you have \$288.80, the net amount.

Another example:—Amount of bill \$327.50 and discount 2%. Use the 98 page and run to 327 and you have \$320.46 and the net value of 50 cents is 49 cents, which can be determined at a glance or by the fraction ½ at the foot of the 98 page or the number above the decimal .5 in the foot table or by referring to 50 in the first column. Add the 49 cents to \$320.46 and you have \$320.95. Or another better and quicker way in this example is to use the 32¾ table, representing \$327.50 and run to 98 and by placing the decimal in the proper position you have \$320.95.

Example:—Amount \$23.75 and the discount 50-10-5 off. This original sum can be expressed by the table 23¾ and by using this table we multiply the "per cent on" which is 42.75 by the table 23¾ by first getting the net amount of 42, which is 9.97, and then the net amount of .75, which is 18, and by adding the two we have the net amount, \$10.15.

These examples are probably sufficient to fully illustrate the system to be followed. If there are any examples encountered that can not be easily and quickly handled by the tables in the book, write the publisher and he will either explain how it can be done or frankly admit that it can not be done successfully.

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

Each table in this computer can be used in three or

## VALUE OF ARTICLES SOLD BY THE TON

Price per ton is given in column on extreme left. Weight at top of column. To find the value of weights between those given, add the value of the two numbers which represent the quantity bought or sold. Number of pounds of Coal, Hay, Straw, Ice, Sand, Fertilizer, or anything bought or sold by the ton.

Price Per Ton	10 Lbs	20 Lbs	30 Lbs	40 Lbs	50 Lbs	60 Lbs	70 Lbs	80 Lbs	90 Lbs	100 Lbs	200 Lbs	300 Lbs	400 Lbs	500 Lbs	600 Lbs	700 Lbs	800 Lbs	900 Lbs	1000 Lbs	1100 Lbs	1200 Lbs	1300 Lbs	1400 Lbs	1500 Lbs	1600 Lbs	1700 Lbs	1800 Lbs	1900 Lbs	2100 Lbs	2300 Lbs

"To compute 600 use 60 and move decimal one place to right. For 1240 use 124 and move decimal and compute all large numbers in same manner. Watch the decimal."

## HANDY FOR PAY ROLLS.

"Smith's Computer" especially adopted to compute the time checks for all kinds of pay rolls.

The tables in this computer have been used extensively in computing pay rolls and wherever adopted have proven a wonderful time and labor saver. This is especially true in factories where the employes are paid by the hour or by the piece. Several bookkeepers have written that by the use of the computer they could make up their pay rolls in less than half the time usually required.

The tables will compute the time of employes at any price per hour and for any number of hours up to 500 or even 50,000. If you pay by the piece it will also compute the pay checks quickly. It is quicker and easier than the expensive multiplying machines for the reason that there is no need of operating the machine as the computations are all made and only need to be copied from the computer to the ledger or pay roll.

To obtain the greatest speed in making up the pay rolls the list should be prepared and all rates per hour or piece set down in a column for the purpose. Then every item that can be worked by one table should be extended while the computer is open to that page. For example, if there are 35 employes receiving 27 cents per hour and their names were scattered among the others the bookkeeper should run down the list while the computer was open to page 27 and set down the amount of each check for the 27 cents per hour men. Then all the others receiving 23 cents per hour or piece should be computed while the book is open to page 23. In this way much time is saved.

If you pay by the day, week or month it is equally efficient and accurate.

There is scarcely a problem in multiplication that is not computed by the tables.

I am willing to send the book, prepaid to any address, and will be glad to have it tested through one pay day and if it does not prove to be all that is claimed for it and is not wanted I will send postage for its return. This is a fair proposition and one can not afford to turn it down. The book costs a mere trifle, compared to the time it will save, providing it can be used to advantage in any office. Awaiting your request for a copy for inspection and trial on one pay day, I am very truly,

J. FRANK SMITH, Publisher,  
Pleasanton, Kansas.

## RULE FOR MEASURING HAY IN STACK.

The common rule for measuring hay in the round stack is as follows: Take one-fourth of the circumference and square it. Take one-fourth of the "over" and multiply by the product of the square of the circumference. If the hay is well settled divide by 343, if it is only fairly well settled divide by 421 and if loose divide by 512. When the hay is in a rick multiply the length by the width and this by one-fourth of the "over" and divide as for round stack.

The measurement of hay is only a close estimate and depends largely on the kind of hay and the time it has had to settle. If well settled the usual rule is to allow 7 square feet to the ton or 343 cubic feet. If  $7\frac{1}{2}$  square feet is allowed for a ton divide by 421 and if 8 square feet divide by 512.

## FOR RETAILING GRAIN AND GRASS SEEDS.

The four pages in this computer of "Comparative Grain Tables" are the most complete and valuable tables ever compiled for the retail dealer in field and garden and grass seeds. They give the comparative value of every kind of seed or grass by the bushel or by the 100 pounds. These tables alone are well worth the price of the book.

## WAGES

## PRICE PER HOUR

**WAGES.**—Price of wages by the hour, when day scale is given.

"To compute 600 use 60 and move decimal one place to right. For 1240 use 124 and move decimal and compute all large numbers in same manner. Watch the decimal."

## TABLE OF WAGES BY THE MONTH.

The table on this page gives the price of wages for any number of days in a month of 26 working days, at the price per month indicated by the figures at the top of each column. The first number in the column, in italics, indicates the price of one day in the month, counting 30 days per month.

## FOR THE LUMBER DEALER.

The four tables giving the number of feet in each piece of all the various sizes of lumber is especially compiled for this edition of "Smith's Computer." Also about forty new pages have been added to the original edition to meet the needs of the lumber business. The four pages of special lumber tables cover about every size that is used in any kind of building.

To find the feet in a given number of boards or dimension stuff use the table representing the feet in one piece and find the number representing the number of pieces and the number opposite will be the number of feet in the lot. The tables in the book include almost every number representing the feet in any size piece of lumber. In some of the frame and bridge timbers, where there are more than 99 feet to the piece, it is necessary to use the page in the book to represent the number of pieces as they will usually not run over 99 pieces. After turning to the page representing the number of pieces find the number of feet in the one piece and the number opposite will be the total feet in the lot of lumber.

To expedite the work and save time and energy in computing the feet and value of lumber the dealer or bookkeeper should have the invoices ruled with proper heads. This can be done with little or no extra expense if attended to when ordering the next lot of printed blanks. This form is only suggestive. Possibly you can arrange one to suit your wants better.

After the items of the invoice of lumber have been set down on the sheet or book then run down the list and compute all that you can without the assistance of the computer or pencil and paper. Then use the "Lumber Tables" to get the number of feet in each piece. Then to find the feet in each item or lot of pieces on the bill, use the tables in the computer, disposing of all the items that have the same number of feet while the computer is open to that page. That is, where you have several items of lumber where pieces contain  $16\frac{1}{2}$  feet each use the  $16\frac{1}{2}$  page to reduce all these items to feet.

After all the lumber has been reduced to feet and the price per foot has been set down in the proper column then compute the value in each item, disposing of all the items of the same price per foot while the computer is open to that page.

## ODD SIZES.

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

**Converting Pounds of Wheat, Potatoes, Beans, Clover, Peas, Etc., Into Bushels**—The table below converts any number of pounds of the above articles, up to 3,500, into bushels and odd pounds. When the price is given and the number of bushels learned, then turn to the table in "Smith's Computer" representing the price, and the amount can be quickly found.

"To compute 600 use 60 and move decimal one place to right. For 1240 use 124 and move decimal and compute all large numbers in same manner. Watch the decimal."

## 70 lbs.

Converting Pounds of Ear Corn Into Bushels—The table below converts any number of pounds of Ear Corn, up to 3,500, into bushels and odd pounds. When the price is given and the number of bushels learned, then turn to the table in "Smith's Computer" representing the price, and the amount can quickly be found.

**Adulterated Milk.**

New York law, defines "adulterated milk" as follows:

1. Milk containing more than 88 per centum of water or fluids.
2. Milk containing less than 12 per centum of milk solids.
3. Milk containing less than 3 per centum of fats.
4. Milk drawn from cows within 15 days before and 5 days after parturition.
5. Milk drawn from animals fed on distillery waste or any substance in a state of fermentation or putrefaction or any unhealthy food.
6. Milk drawn from cows kept in an unhealthy condition.
7. Milk from which any part of the cream has been removed.
8. Milk which has been diluted with water or any other fluid, or to which has been added or into which has been introduced any foreign substance whatever.

**Legal Standards for Milk and Cream.**

(American Agriculturist Year Book and Almanac.)

The question of milk standard is being discussed with more interest every year throughout the country. It was only a few years ago when many of the states recognized no standard and still others were content with a few statements relative to adulterating the lacteal fluid. In the east, the merits of high and low standards are receiving much attention.

There is a sentiment rapidly gaining favor which declares there should be no standard, and that milk should sell on its merits the same as other articles of commerce. However, this seemingly radical departure has not, to date, been incorporated in a state law. Arizona, Arkansas, Kentucky, Nevada and Oklahoma have no state standards. In Alaska and Colorado the matter is in the hands of local cities and towns. West Virginia has no regular state standard other than regulations relative to adulteration.

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

## Money, Weights and Measures.

### U. S. MONEY.

10 mills ( <i>m</i> )	.. 1 cent ( <i>ct.</i> )
10 cents	.. 1 dime ( <i>d.</i> )
10 dimes	.. 1 dollar ( <i>\$</i> )

### COMMERCIAL WEIGHTS.

16 drams ( <i>dr</i> )	.. 1 ounce ( <i>oz.</i> )
16 ounces	.. 1 pound ( <i>lb.</i> )
2000 pounds	.. 1 ton ( <i>T.</i> )

### DRY MEASURE.

2 pints ( <i>pt.</i> )	.. 1 quart ( <i>qt</i> )
8 quarts	.. 1 peck ( <i>pk.</i> )
4 pecks	.. 1 bushel ( <i>bu.</i> )

### LONG MEASURE.

12 inches ( <i>in.</i> )	.. 1 foot ( <i>ft.</i> )
3 feet	.. 1 yard ( <i>yd.</i> )
16½ feet	.. 1 rod ( <i>rd.</i> )
320 rods	.. 1 mile ( <i>mi.</i> )

### TIME MEASURE.

60 seconds ( <i>sec.</i> )	.. 1 minute <i>min</i>
60 min	.. 1 hour, <i>hr.</i>
24 hours	.. 1 day, <i>da.</i>
365¼ days	.. 1 year, <i>yr.</i>

### SQUARE MEASURE.

144 square inches	.. 1 sq. foot.
9 square feet	.. 1 sq. yard.
30¼ square yd's	.. 1 sq. rod.
272¼ square feet	.. 1 sq. rod.
160 square rods	.. 1 acre ( <i>A.</i> )
640 acres	.. 1 sq. mile.

### ENGLISH MONEY.

4 farthings, <i>far.</i>	.. 1 penny, <i>d.</i>
12 pence	.. 1 shilling, <i>s.</i>
20 shillings	.. 1 pound, <i>lb.</i>

### TROY WEIGHT.

24 grains, <i>gr.</i>	.. 1 penny w't, <i>pwt</i>
20 penny w'ts	.. 1 ounce, <i>oz.</i>
12 ounces	.. 1 pound, <i>lb.</i>

### CIRCULAR MEASURE.

60 seconds	.. 1 minute.
60 minutes	.. 1 degree.
360 degrees	.. 1 circle.

### SURVEYOR'S MEASURE.

7.92 inches	.. 1 link, <i>lk.</i>
25 links	.. 1 rod, <i>rd.</i>
100 lks or 66 ft.	.. 1 chain, <i>ch.</i>
80 chains	.. 1 mile, <i>mi.</i>

### LIQUID MEASURE.

4 gills, <i>gi</i>	.. 1 pint <i>pt.</i>
2 pints	.. 1 quart, <i>qt.</i>
4 quarts	.. 1 gallon, <i>gal.</i>
31½ gallons	.. 1 barrel, <i>bbl.</i>

### CUBIC MEASURE.

1728 cubic in	.. 1 cubic foot
27 cubic feet	.. 1 cubic yard.
128 cubic feet	.. 1 cord (wood)
24.75 cu feet	.. 1 perch (stone)
231 cubic in	.. 1 gallon
2150.4 cubic in	.. 1 bushel

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

## Loss of Butter Caused by Inefficient Skimming

If three-tenths of one per cent. of fat is left in the skim milk instead of two-tenths in a separator creamery receiving 1000 pounds of milk a day, there will be a loss of about 340 pounds of butter for the whole year on the supposition that 1000 pounds of milk yield 800 pounds of skimmilk and one pound of butter contains .86 pounds of fat. If the separation is still poorer, greater losses will be sustained, as will be seen in the table given below.

Per cent Butter Fat left in skim milk	0.05	0.1	0.2	0.3
Lbs. Milk per day	Lbs butter lost during year			
1,000.....	170	340	680	1,020
2,000.....	340	680	1,360	2,040
3,000.....	510	1,020	2,040	3,060
4,000.....	680	1,360	2,720	4,080
5,000.....	850	1,700	3,400	5,100
6,000.....	1,020	2,040	4,080	6,120
7,000.....	1,190	2,380	4,760	7,140
8,000.....	1,360	2,720	5,440	8,160
9,000.....	1,530	3,060	6,120	9,180
10,000.....	1,700	3,400	6,800	10,200

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

**Practical Rules in Arithmetic.**

To find the circumference of a circle multiply diameter by 3.1416.

To find the area of a circle multiply square of diameter by .7854.

To find the diameter of a circle, multiply the circumference by .31831.

One ton of coal is equivalent to two cords of wood for steam purposes.

The average consumption of coal for steam boilers is 12 lbs per hour for each square foot of grate surface.

To find the pounds pressure of a column of water in a standpipe or reservoir, multiply the height in feet by .434.

Each nominal horse power of a boiler requires 30 to 35 lbs of water per hour, or from 3½ to 4 gallons and from 3 to 4 lbs of coal to convert the water into steam.

SQUARE TANK OR VAT:—Multiply the number of cu. ft. by 7.48 to find gallons and by .238 for barrels.

SHINGLES:—When exposed 4 inches to weather the usual estimate is 9 shingles per sq. ft. Or allowing for waste and defects, 1000 shingles to the square of 100 feet (10 ft x 10 ft)

CISTERNS, TANKS, ETC:—Multiply the square of the average diameter by the depth (all in feet) and this product by 5⅞ to find the number of gallons. To find the number of barrels take 3-16 of the product.

STONE:—A perch of stone masonry is 16½ ft. long, 1½ ft. wide and 1 ft. high, and contains 24¾ cu. ft. To find the

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

number of perch of stone in a wall, reduce it to cubic feet and divide by 24  $\frac{3}{4}$  or multiply by .0404.

**LOG MEASURE:**—To find the square feet of lumber in logs over 12 inches in diameter, square the diameter (in inches) subtract 60 and multiply the remainder by one half the length (in feet) and point off the right hand figure.

**GRAIN:**—To find the capacity of a bin or wagon bed, multiply the number of cubic feet by .8. For greater accuracy, add  $\frac{1}{3}$  bu. for every 100 cu. ft. A wagon bed 3 ft. wide and 10 ft. long holds 2 bu. for every inch in depth.

**EAR CORN:**—Corn in the ear, of good quality and well settled, will run 2  $\frac{1}{4}$  cu. ft. per bushel. When corn is poor or not settled it will run from 2  $\frac{3}{8}$  to 2  $\frac{1}{2}$  cu. ft. per bu. At 2  $\frac{1}{2}$  cu. ft. per bu. multiply cu. ft. by 4 and divide product by 9. When 2  $\frac{3}{8}$  cu. ft. to bu. multiply by 8 and divide by 19. When 2  $\frac{1}{2}$  cu. ft. is used multiply by 4 and divide by 10.

**HAY:**—To find the number of tons of hay in a stack or mow by measuring is only making a close estimate as the exact number of tons depends on the kind of hay, the time it has settled etc. The most compact timothy hay will average 350 cu. ft. per ton. New hay not settled will require 500 cu. ft. or over. Other grades of hay will average between these two numbers.

"To compute 600 use 60 and move decimal one place to right. For 1240 use 124 and move decimal and compute all large numbers in same manner. Watch the decimal."

"To compute 600 use 60 and move decimal one place to right. For 1240 use 124 and move decimal and compute all large numbers in same manner. Watch the decimal."

Each table in this computer can be used in three or more ways. Example, 23½ can represent 23½ cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

Each table in this computer can be used in three or more ways. Example,  $23\frac{1}{2}$  can represent  $23\frac{1}{2}$  cents, \$2.35 or \$23.50. Move the decimal to give correct amount.

"To compute 600 use 60 and move decimal one place to right. For 1240 use 124 and move decimal and compute all large numbers in same manner. Watch the decimal."
